A
Naive simulation
(true effects + Gaussian noise)
mean bias +0.07
mean |error| 0.09
recall observed in real data
recall predicted by simulation
transcriptome
root traits
bacterial growth
pairs
triplets
B
Calibrated simulation
(empirical effect-size model)
mean bias +0.04
mean |error| 0.05
recall observed in real data
recall predicted by simulation
C
What drives the cost
K=18
K=50
K=100
sparse (no background)
dense small interactions
N for 95% recall (5 interactions)
size of the interactions sought
(× replicate SD)
